"A ubiquitin mutant with specific defects in DNA repair and multiubiquitination.";

Mol. Cell. Biol. 15:1265-1273(1995).

Mol. Cell. Biol. 15:1265-1273(1995).

-i- FUNCTION: INVOLVED IN THE ATP-DEPENDENT SELECTIVE DEGRADATION CELLULAR PROTEINS, THE MAINTENANCE OF CHROMATIN STRUCTURE, THE REGULATION OF GENE EXPRESSION, THE STRESS RESPONSE, AND RIBOSOM BIOGENESIS AND DNA REPAIR.

-i- SUBCELLULAR LOCATION: Nuclear and cytoplasmic.

-i- MISCELLANEOUS: UBII AND UBI2 ARE SYNTHESIZED AS A POLYPROTEIN WORL COPY OF UBIQUITIN FUSED TO RIBOSOMAL PROTEIN S37. UBI3 IS A POLYPROTEIN WITH ONE COPY OF UBIQUITIN FUSED TO ANOTHER RIBOSOM
                                                                                                                                           the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC GM-1 yanglioside receptors on host cell surfaces. Both Etx and Ctx are composed of one A subunit and five identical B subunits. The A subunit CC is responsible for toxicity, possessing adenosine diphosphate (ADP) ADP-CC ribosyltransferase activity, while the B subunits (EtxB and CtxB) CC facilitate the entry of subunit A into the host cell via the binding and CC ross-linking of GM-1 receptors. Although GM-1 binding is responsible CC for some of the effects of Etx and Ctx, it has been found that certain CC effects of the toxins, such as immunomodulation, are not mediated CC through GM-1 binding. The peptides of the invention are fragments of the beta-4-alpha-2 loop of EtxB and/or CtxB, exerting the same effects as CC normal EtxB and CtxB subunits, except that they do not bind or cross link CC GM-1. They may be used in medicine as an immunomodulator or adjuvant. CC They may also be used as an inhibitor for toxin-induced diarrhoea. CC Therefore, the peptides may be used in the production of a composition CC immune disorder and/or toxin-induced diarrhoea. Sequences AAX87460-Y87463 CC represent preferred peptides of the invention, AAX87460 being

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
CC involving analysis of the 3-dimensional form of the crystalline cholotoxin. The pertussis holotoxin modification process comprises: CC (1) identification of at least one amino acid (aa) residue of the crystalline cc (1) identification of at least one amino acid (aa) residue of the ccystalline holotoxin, in relation to known information of the protein ct crystalline holotoxin, in relation to known information of the protein ct curvature and function; (2) effecting mutagenesis (by removing or cc replacing a nucleotide sequence encoding at least one (aa)) of a tox operon; and (3) expressing mutant tox box in a Bordetella organism to produce the modified holotoxin. This method is used for modifying crystalline structure. Modifying the holotoxin, alters its biological properties. By analysing the 3-dimensional crystalline structure of the pertussis holotoxin, functional (aa) which affect biological properties of the pertussis holotoxin can be identified. This can be used to predict (aa)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Loc

The structural information obtd, from these comparisons was used to identify sites which contribute to PT's biological activity. By modifying these sites the claimed PT mutants of the invention were produced, they can be used in the development of vaccines against Bordetella

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
The invention relates to methods of preparing a pertussis holotoxin (PT)
C having a modified biological activity. One method comprises identifying
at least 1 site in a PT that interacts with a molecule that is capable of
forming a complex with the holotoxin and which molecule is an effector
molecule which is an adenine nucleotide and which site contributes to
toxicity, cell binding or enzymatic activity of PT. The functional
interacting site(s) are identified by analysing the three dimensional
structure of crystalline PT, determined by X-ray crystallogaphy. The
identified interacting site(s) are modified to alter toxicity, cell
binding or enzyme activity of the PT. The methods can be used to alter a
biological activity such as toxicity, enzymatic activity, mitogenicity,
cell binding and adjuvanticity of the PT. The three-dimensional structure
of PT have functional and/or structural resemblance to other bacterial
toxins such as diphtheria toxin (DT), Pseudomonas exotoxin A (ETA), the
heat-labile toxin of E. coli (LT) and verotoxin-1 (VT). The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                           pertussis holotoxin, in which the molecules of pertussis toxin have a three dimensional structure represented in the specification, complexed with a polysaccharide molecule capable of forming a complex with the holotoxin. The crystalline form of the pertussis holotoxin can be used in a comparison with other proteins which have functional resemblance to pertussis holotoxin with the aim of modifying other proteins. Identifying the unknown sites of toxicity by comparison with the three dimensional structure of pertussis holotoxin provides a technique for detoxification of toxins to produce useful immunogenic but non-toxic analogues. It can also be used as a primary standard to measure the quantity, purity or efficacy of less pure compositions containing pertussis toxin. AAV68340 to AAV68385 represent peptides used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Crystalline for proteins which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pertussis toxin; heat labile toxin; verotoxin; exotoxin A; holotoxin; diphtheria toxin; ADP-ribosylating toxin; mannose binding protein; infection; crystal structure; X-ray crystallography; detoxification;
